National Conference on Artificial Intelligence

**AN EFFICIENT AND ETHICAL
AI STRATEGY SERVING OUR SOCIETY**

SUMMARY REPORT

JULY 1-2, 2025, RABAT

National Conference on Artificial Intelligence

SUMMARY

EXECUTIVE SUMMARY	06
Introduction : AI in Morocco: A Major Strategic Turning Point Under High King's Leadership for an Intelligent, Sovereign, and Inclusive Future	11
I. Global context of the scale of AI and the potential for Morocco's repositioning	12
II. The 1st National AI Conference: A Catalyst for a Transformative Prospective Revolution	13
III. Building Digital Trust: Governance, Ethics, Legal Framework, and Cybersecurity at the Core of Moroccan AI	15
IV. Sovereign Digital Infrastructures: The Indispensable Physical Foundation to Unlock the Potential of AI	18
V. Human Skills, Research, and Innovation: The Essential Drivers of the Moroccan AI Ecosystem	20
VI. AI, Catalyst for Transformation: Sectoral Perspectives for an Obvious and Inclusive Impact	22
VII. Morocco as a Global AI Actor: International Positioning and Strategic Cooperation	29
VIII. Elements of an AI roadmap in Morocco: Synthesis of Cross-Cutting Challenges and the Eight Fundamental Pillars for Action	31
IX. General Conclusion: From Strategic Reflection to the Realization of Morocco's AI Ambition	33
X. Strategic Conventions Signed: The First Acts of Implementation of the Conference	34
XI. Formal Closing Ceremony: The Starting Point for Accelerated Action by Artificial Intelligence	36
XII. Formal Closing Act: Message of Homage and Gratitude from Participants to His Majesty the King	38
THEY CARRY THE VISION	40
RECOMMENDATIONS	44
PRESS COVERAGE	46

صَاحِبُ الْجَلَالَةِ الْمَلِكُ مُحَمَّدُ السَّادِسُ نَصْرُهُ اللَّهُ

“

[....] Investment in renewable energies, Artificial Intelligence, and new technologies offers a real opportunity to boost development efforts, ensure the transition to green and sustainable economic models, and align with the dynamics of evolution at work in the world [....]

”

Speech by His Majesty King Mohammed VI,
*may God assist Him, at the 34th Summit of the League of Arab
States, in Baghdad, in the Republic of Iraq. May 17, 2025*

EXECUTIVE SUMMARY

The First National Conference on Artificial Intelligence, held in Rabat on July 1st and 2nd, 2025, under the High Patronage of His Majesty King Mohammed VI, may God assist him, marked a pivotal moment and a decisive strategic turning point for the digital future of the Kingdom. In a global context where Artificial Intelligence (AI) is reshaping power balances and deeply transforming economies and societies, the Ministry of Digital Transition and Administration Reform (MDTAR) has, through this initiative, affirmed its strong commitment to placing AI at the core of its public policies. The clear ambition is to establish the Kingdom as a pioneer and a regional and African hub for sovereign, ethical, and inclusive AI, rooted in an enlightened King's vision and supported by the ambitious Morocco Digital 2030 strategy.

This event successfully achieved national mobilization, actively bringing together all key stakeholders: government, the private sector, academics, and civil society, enriched by the valuable contribution of renowned international experts and dignitaries. This inclusive dialog has helped consolidate a shared and lucid diagnosis and recommendations that will form the elements of a national AI roadmap. The conference highlighted the enormous transformative potential of AI, capable of accelera-

ting the achievement of 79% of the Sustainable Development Goals (SDGs) and significantly contributing to global Gross Domestic Product au lieu de (estimated at 26% by 2030). However, to fully unlock this potential, we must overcome significant and interdependent challenges.

These challenges notably include the absolute necessity of building a robust digital trust framework encompassing legal and ethical aspects, cybersecurity; the urgent need to massively train a qualified human capital and adapt skills to the rapid evolution of professions; the crucial need to significantly invest in sovereign digital infrastructures (high-performance computing, data centers); the necessary mobilization of financing and support for innovation to foster the emergence of local AI production; the management of AI adoption and organizational and societal transformation; the establishment of effective governance and intersectoral coordination; the strengthening of Morocco's international positioning and, preferentially, South-South cooperation; and finally, the reduction of the digital and social divide to ensure equitable access to technologies and the benefits of AI.

In reply to these identified challenges, the

conference has outlined and validated the major strategic orientations forming the foundation of Morocco's future National Artificial Intelligence roadmap. The structure of these

orientations revolves around eight fundamental pillars, which together form an ambitious and pragmatic roadmap:

- 1 Establish a robust trust framework and agile and ethical governance by adapting the institutional and legal framework, promoting ethics, and strengthening cybersecurity.
- 2 Invest massively and sustainably in critical and sovereign digital infrastructures by accelerating the deployment of nationally secured computing and storage capacities.
- 3 Develop human competence to master AI through an ambitious national training plan and talent attraction initiatives.
- 4 Promote innovation and local AI production by supporting research and development (R&D) as well as the startup ecosystem to create tailored solutions.
- 5 Boost financing and accelerate the massive adoption of AI by mobilizing diversified financial resources and assisting sectoral deployments.
- 6 Strengthen Morocco's international positioning and leadership in South-South Cooperation by actively participating in global governance and fostering regional partnerships.
- 7 Ensure inclusion and equity in access to AI by reducing territorial and social inequalities and adapting tools to local needs.
- 8 Decisively move to concrete and measurable action by prioritizing high-impact projects and establishing rigorous monitoring.

The firm commitment to move from reflection to concrete action was immediately illustrated by signing several strategic agreements on the sidelines of the conference, covering essential areas such as education, energy, digital cooperation, and rural inclusion. These partnerships signal the solid launch of the operational phase.

Ultimately, the First National AI Conference reaffirms Morocco's strategic commitment,

under the enlightened leadership of His Majesty the King, to make artificial intelligence a fundamental lever for national development, a key instrument of digital sovereignty, and a powerful catalyst for building a smarter, fairer, more inclusive, and more prosperous future, thereby contributing to the Kingdom's prominence on the regional and international stage.

“

Meeting the challenges posed by artificial intelligence requires a collective effort, common and global reflection, and organization [...]
We must establish clear rules. Artificial intelligence can only be effective within a framework of trust

”

Mr. Aziz AKHANNOUCH,

Head of Government

Excerpt from the speech at the opening session on July 1

“

AI is not an end in itself, but rather a tool within a larger civilizational project [....] True success will not be measured by the number of algorithmic feats, but rather by their contribution to the establishment of digital justice, the strengthening of citizen trust, and the consolidation of sovereignty.

”

Mrs. Amal EL FALLAH SEGHROUCHNI,

Minister Delegate to the Head of Government in charge of Digital Transition and Administrative Reform.

INTRODUCTION

AI IN MOROCCO: A MAJOR STRATEGIC TURNING POINT UNDER HIGH KING'S LEADERSHIP FOR AN INTELLIGENT, SOVEREIGN, AND INCLUSIVE FUTURE

Artificial intelligence is reshaping the global chessboard and propelling societies into unprecedented transformation. With this key turning point, Morocco has taken a decisive initiative, driven by an enlightened and initiative-taking king's vision, and placed under the high patronage of His Majesty King Mohammed VI, may God assist him.

The Head of Government, Mr. Aziz Akhannouch, emphasized at the opening that the National AI Conference constitutes a significant step in asserting our digital and technological sovereignty, reflecting Morocco's commitment to placing artificial intelligence at the core of its public policies.

In her opening speech, the Minister Delegate to the Head of Government in Charge of Digital Transition and Administrative Reform, Mrs. Amal El Fallah Seghrouchni, highlighted the urgency for Morocco to collectively and institutionally recognize that AI is not just a future technology but rather a "current reality that is redefining the future." It is revolutionary to enter social protection, education, health, finance, and land use planning systems.

The First National Artificial Intelligence Conference, held in Rabat on July 1st and 2nd, 2025, marked a historic milestone: that of national mobilization to build a sovereign, ethical, and inclusive AI roadmap, firmly positioning the Kingdom as a regional hub at the core of the ambitious Morocco Digital 2030 strategy.

In a global context where AI is a determining power factor, this conference brought together all the vital forces of the nation—government, private sector, academic world, and civil society—alongside experts and international leaders.

The fundamental objective, as defined from the opening session by the Minister Delegate, was to:

- > *Create a mutual understanding of the current state of AI and its potential.*
- > *Explore in depth the opportunities in priority sectors.*
- > *Identify the significant challenges to overcome (technological, economic, social, ethical, legal).*
- > *Formulate substantial recommendations to structure an efficient, ethical, inclusive, and sovereign national strategy."*

This report synthesizes productive exchanges related to the plenary sessions and thematic round tables. It highlights the indispensable strategic foundations and the identified cross-cutting challenges and presents the eight fundamental pillars forming the basis of Morocco's future National Artificial Intelligence Roadmap. The appendix includes summary sheets for each session, sources of concrete examples, and precise recommendations for comprehensive documentation.

I. GLOBAL CONTEXT OF THE SCALE OF AI AND THE POTENTIAL FOR MOROCCO'S REPOSITIONING

The presentation of enlightening key statistics during the conference effectively demonstrated the strategic significance of artificial intelligence and the urgency of a decisive strategic response.

1.1. Global Competitiveness and Inequalities: A Competitive Context Marked by Obvious Disparities

Massive global investments in AI, projected to reach nearly a trillion dollars by 2025, starkly contrast with the small share allocated to Africa (<5%). The Permanent Representative of Morocco to the UN, Mr. Omar Hilale, quantified these investments: nearly one trillion dollars for developed countries by 2025 (including US 500 billion, EU 200 billion, and China 138 billion) compared to 226 billion for the Global South (including UAE 140 billion, AS 8 billion, and Africa 60 billion announced at the Kigali summit). He emphasized that Africa would receive less than 5% at the current price. This gap reveals a race at multiple speeds and a risk of worsening technological and economic inequalities between the North and the South.

1.2. Potential for a Deep Transformation: AI, an Invaluable Lever for the SDGs, and Global GDP

AI's potential to contribute to achieving the Sustainable Development Goals (SDGs) is immense, as is its expected contribution to the global GDP (estimated at five trillion by 2030, or 26% of the global GDP). These figures highlight AI's unprecedented opportunity for economic and social development. Ms. Amal El Fallah Seghrouchni reminded us of the significant potential of AI to meet the Sustainable Development Goals, with 79% of them potentially achievable. She described AI as an essential "development lever" for the African continent, which is significantly behind on these goals and needs accelerators (only 6% estimated to be achieved by 2024 according to UNDP).

1.3. Persistent Digital Divide: A Challenge of Inclusion and Sovereignty on a Global and African Scale

The persistence of a significant global digital divide (2.6 billion people without internet access) and the fact that 99% of African data is hosted outside the continent highlight the crucial challenges of inclusion, equitable access to technologies, and, above all, digital sovereignty that urgently need to be addressed for Africa and Morocco.

1.4. Moroccan Strengths and Ambitions: Reposition the Kingdom as a Trusted Regional Leader

Considering these global challenges, Morocco has solid assets and displays a clear and determined objective. The ambitious Morocco Digital 2030 strategy illustrates the state's financial commitment. The potential in human capital is remarkable, with a national ambition to train 100,000 talents in digital skills, including AI. The active international role of the Kingdom, notably praised by Ms. Deemah Alyahya from the DCO as making Morocco a "model for the MENA region and beyond," demonstrates its ability to establish itself not only as a savvy user but also as a player, a producer, and a regional leader in trusted AI.

II. THE 1ST NATIONAL AI CONFERENCE: A CATALYST FOR A TRANSFORMATIVE PROSPECTIVE REVOLUTION

Against the global context of an accelerated transformation driven by artificial intelligence, Morocco recognizes the strategic imperative of mastering this technology for its development and sovereignty. The First National Conference was the catalyst for this ambition.

2.1. The First National Conference: The King's Impulse to Realize the Kingdom's Digital Future

The First National Conference on Artificial Intelligence, held in Rabat on July 1 and 2, 2025, under the High Patronage of His Majesty King Mohammed VI, may God assist him, constituted an event of historical significance. They marked a decisive milestone in the Kingdom's trajectory toward realizing its strategic vision for the digital future. As highlighted by the Minister Delegate in charge of Digital Transition, Ms. Amal El Fallah Seghrouchni, AI has evolved from a mere technological element to a "central engine" of structural transformation and a "cross-cutting lever" for all public policy.

Driven by the ambitious Morocco Digital 2030 Strategy, the objective of the conference is to make Morocco a pioneer and a regional hub for AI, using it as a powerful catalyst for economic and social development and an indispensable lever for consolidating national digital sovereignty.

2.2. AI: A Major Geopolitical and Economic Reality for Morocco

The emergence of Artificial Intelligence (AI) has definitively changed its status to become a major geostrategic issue and a potential driver of profound transformation for economies and societies. In this swiftly advancing global environment, mastering, developing, and deploying AI in a supervised and ethical approach is no longer an option for a nation. It is a critical determinant for its future placement, competitiveness, and guaranteed sovereignty in the digital age. The Head of Government stated that AI is no longer a luxury but a key lever for economic and social transformation.

The Minister Delegate, Mrs. Amal El Fallah Seghrouchni, highlighted that AI is not a neutral technology but a "system of knowledge and authority that reshapes power dynamics" within society, in ties between citizens and the state, as well as in interstate relations. Mastering this competence is a crucial determinant of a nation's future strength and the assurance of its sovereignty. The incorporation of AI on a national scale is fundamentally essential for maintaining sovereignty, ensuring that technological advancements are congruent with the ethical principles of humanity and do not violate the democratic framework.

2.3. An Unprecedented Mobilization: The Conference, Platform for Dialogue, and Strategic Emergence

The main goal of this conference, which the Minister Delegate for Digital Transition, Madam Amal El Fallah Seghrouchni, called "unprecedented," was to gather and involve everyone in the national ecosystem—like the government, private companies, schools, universities, research centers, and community groups—along with experts and notable international guests.

The conference format integrated plenary sessions, thematic roundtable discussions, and innovation exhibition spaces to promote inclusive strategic dialogue and facilitate the development of constructive proposals and actionable plans.

The level of this mobilization was clearly shown by the high number of participants in the Assises, which took place over 2 days and included 13 main topics, 6 large group sessions, and 15 smaller discussion groups.

- > *There were more than 130 national and international speakers, representing over 30 countries.*
- > *There was significant representation from the 12 regions of Morocco, including the regional presidents.*
- > *Over two hundred public actors, over five hundred private actors, and more than sixty entrepreneurs are all part of the ecosystem. Additionally, thirty exhibitors are present to highlight the innovative capabilities of the local community.*
- > *The 2,300 people who signed up before the deadline and many more who signed up for streaming show that the conference attracted a lot of attention from the public.*
- > *These numbers demonstrate how well the conference served as a meeting place for national and international stakeholders to discuss and unite behind the major AI challenges.*

III. BUILDING DIGITAL TRUST: GOVERNANCE, ETHICS, LEGAL FRAMEWORK, AND CYBERSECURITY AT THE CORE OF MOROCCAN AI

At the core of deploying artificial intelligence within Moroccan society, building a sustainable climate of trust is essential for its success, acceptance, and appropriation. AI is not neutral technology, as emphasized by the Minister Delegate in charge of Digital Transition and Administrative Reform, Mrs. Amal El Fallah Seghrouchni. It "reshapes power dynamics," and the construction of "new systems of trust between citizens and the State" is a "fundamental institutional responsibility." These strong foundations are indispensable for guaranteeing that AI is developed and employed in accordance with the paramount interests of citizens, fundamental rights, and national values.

The AI trust system should be founded on four strategic principles: initiative-taking and inclusive governance, a precise and adaptable regulatory framework, cybersecurity by design, and robust ethical assurances. The first National AI conference emphasized the need to establish a national legal framework that aligns with international norms, including European AI rules, to safeguard digital sovereignty, basic freedoms, and responsible innovation. We advise the establishment of regulation, auditing, certification, and labeling to govern the use of AI and mitigate any risks. Ensuring algorithmic transparency and governance is essential to prevent unfair practices and preserve public involvement.

3.1. Launch Agile, Resilient, Transparent, and Shared Governance for the AI Ecosystem

Clear, transparent governance that involves all stakeholders is the foundation of digital trust. A governance that is both resilient and forward-thinking, which is supported by robust strategic monitoring mechanisms and encourages ongoing consultation, is advised.

The Minister Delegate, Amal El Fallah Seghrouchni, emphasized that artificial intelligence poses numerous governance challenges, particularly regarding how to ensure that decision-making stays within the authority of the institution instead of being dictated by algorithms.

Enhancing current institutional capabilities in the digital sphere and instituting participatory and localized governance are considered essential for a roadmap really anchored in the nation's reality. She characterized this aspect of the national discourse on AI as a strategic discussion including both its symbolic and planned elements.

The national aim of a sovereign, inclusive, and ethical AI depends on agile, initiative-taking, and collaboratively developed governance that addresses regional disparities and guarantees equitable access to AI.

This entails the creation of local and sectoral consultation platforms that incorporate citizens into decision-making processes, utilizing a "quadripartite" framework that includes the state, businesses, researchers, and civil society.

This approach seeks to mitigate disruptions and deviations while fostering responsible innovation.

3.2. Create a Robust and Agile Legal Framework, Protector of Citizens, and Catalyst for Responsible Innovation

The discussions brought to light the need to establish a thorough, flexible, and foreseeable legal and regulatory framework for the Kingdom. An essential problem of sovereignty is the need for a framework that can keep up with the ever-changing landscape of artificial intelligence (AI) technology while simultaneously safeguarding the personal information and human rights of individuals.

Madam Amal El Fallah Seghrouchni has announced that her ministry is in the process of preparing a draft law concerning digital administration. It will include specific rules for using AI in administrative tasks and working closely with organizations responsible for maintaining digital trust, such as the CNDP, the DGSN, and the DGSSI. The draft law being prepared also seeks to restore digital trust, which the minister delegate regards as a "cornerstone" of the relationship between citizens and administration in this new era.

It is essential to ensure fundamental rights, including the right to receive an explanation for automated decisions made by AI systems and the practical opportunity to appeal those decisions. This legislation will specifically focus on enhancing the transparency of administrative algorithms and safeguarding the right to comprehend and challenge them. It is highly recommended that a Moroccan legal framework for AI be established, taking inspiration from relevant international models (such as the European AI Act) and making sure that it is in line with both national values and international standards (such as the United Nations).

The legal framework should explicitly outline the responsibilities of all parties involved in AI systems, such as administrations, technology providers, and economic operators, to establish a transparent accountability system in the event of errors, damage, or systemic failures. It should also incorporate systems for ongoing legal oversight to adjust to technological advancements.

3.3. Anchoring AI in a global ethical system, respectful of values and human rights.

The Conference has facilitated the creation of clear and unwavering guiding principles on the ethical front. Based on the important values of the Kingdom and following global standards, these principles include being open about how public and private algorithms work; actively working to reduce biases in algorithms related to demographics, ethnicity, or culture found in some AI models; ensuring fairness and no discrimination in AI use; and clearly outlining who is responsible when something goes wrong or causes harm.

Ms. Amal El Fallah Seghrouchni, the Minister Delegate in charge of Digital Transition and Administrative Reform, warned about the risks of algorithmic biases that may result in exclusion and discrimination, particularly affecting vulnerable groups. She highlighted the "ethical obligation" associated with the use of AI systems, stressing the importance of fairness, equality, and the need to prevent discrimination.

Various practical mechanisms for implementing these ethics have been examined, including the creation of sector-specific ethical charters, independent auditing processes for AI systems, and public certifications for solutions that adhere to the established principles. The matter of algorithm explainability, often referred to as "black boxes," is considered vital, especially in fields where AI decisions significantly affect human life, such as healthcare, administration, and justice.

Implementing systematic human oversight in all high-impact applications is crucial to avoid unchecked decision-making by autonomous machines. Experts highlight the importance of establishing an ethical regulatory authority to oversee potential deviations and provide critical assessments on controversial applications. Ethics should be evident in control procedures, documentation requirements, and institutional assurances. Incorporating ethics into AI design is essential for preventing biases and enhancing the effectiveness of public institutions. Establishing a national ethical charter for AI is essential.

3.4. Cybersecurity, an Indispensable Keystone for Sustainable Digital Sovereignty

Cybersecurity is widely recognized as a crucial security necessity, inherently connected to the implementation of AI. Ensuring the resilience of AI systems and digital infrastructures against attacks and cyber threats, which are increasingly sophisticated due to AI, is crucial. A thorough national digital resilience strategy that incorporates AI is crucial.

The growing sophistication of cyber threats necessitates improved defense strategies, the responsible engagement of all stakeholders, a thorough identification and protection system for critical infrastructures, and the incorporation of AI into detection and response mechanisms (through AI-augmented Security Operations Centers—SOCs). The importance of collaboration between the public and private sectors has been highlighted.

Investing in sovereign platforms for cyber threat analysis and creating sovereign infrastructures, like a strong national cloud for hosting critical data, is crucial for enhancing digital sovereignty and minimizing strategic reliance on foreign solutions.

The experience of Estonia illustrates that cyber resilience depends on a secure, interoperable, and sovereign data architecture, along with a well-defined data governance strategy. It urges public decision-makers to comprehend the complexities of cybersecurity, risk management frameworks, and the fundamentals of "security by design" in the digitization of services.

IV. SOVEREIGN DIGITAL INFRASTRUCTURES: THE INDISPENSABLE PHYSICAL FOUNDATION TO UNLOCK THE POTENTIAL OF AI

The advancement and widespread implementation of artificial intelligence necessitate state-of-the-art digital infrastructures. They should be prevalent and available across the whole region, sufficiently effective to satisfy the increasing needs for computing and storage, and most importantly, managed at the national level. These infrastructures serve as a crucial foundation for any ambitious AI strategy.

During the sessions, several speakers emphasized the structural interdependence between the needs of AI and the availability of robust energy infrastructures. Madame Leïla Benali, the Minister of Energy Transition and Sustainable Development, stated, "Without energy, it is simply impossible to operate data centers."

The conversations reaffirmed the importance of efficient interconnection among digital, energy, and territorial infrastructures. The proposal aims to pinpoint strategic locations for the establishment of data centers linked to renewable energy production, specifically solar and wind, with a focus on southern Morocco, to enhance performance, sustainability, and energy independence.

4.1.4.1. The Urgent Need for Significant Investment in Infrastructure to Close the Divide and Achieve Territorial Equity

The substantial demands of AI for computing power (High-Performance Computing—HPC), storage capacity (data centers) to manage exponential data volumes, and extremely high-speed connectivity (including redundant submarine cables for resilience) position infrastructure as a key strategic pillar.

The implementation of AI solutions and research in Morocco encounters a notable obstacle stemming from the existing lack of these infrastructures. Ms. Amal El Fallah Seghrouchni, the Minister Delegate in charge of Digital Transition and Administrative Reform, highlighted the critical need for enhanced computing power and storage capacity at the regional level, noting that less than 1% of global data centers are located in Africa. She additionally noted a "critical lack of infrastructure" and mentioned that 99% of African data is hosted outside the continent. The Conference, thus, reiterated the importance of substantial and sustainable investment in their development.

This mobilization should be anchored in robust governance and creative financing strategies. A technological sovereign fund, which ensures long-term infrastructure investments alongside the private sector, is recognized as a key strategic tool. A clear incentive framework was proposed, including tax, land, and regulatory advantages, to encourage the establishment of data centers and AI platforms within the national territory.

4.2. Ensuring Digital Sovereignty and Resilience: A National Priority Issue

Here, the concept of digital sovereignty is fully realized. Depending solely on overseas providers or infrastructures for the hosting and processing of sensitive data introduces established risks related to security, confidentiality, and service continuity. The conference highlighted the importance of developing strong public and private digital infrastructures within the nation to maintain control over our data and essential systems.

Multiple speakers highlighted that digital sovereignty encompasses the mastery of the technological value chain. This means keeping important data within the country and making sure that key components (like software, network layers, and equipment) are not dependent on outside suppliers unless they pass a security check. It has been advised that operators managing public or general interest data should implement localization obligations and specific cybersecurity requirements.

4.3. Growing Our Nation's Capacity: A Sovereign Cloud and State-of-the-Art Data Centers

Creating a Moroccan sovereign cloud to safeguard essential data for the State, businesses, and citizens is an urgent strategic priority and a prerequisite for digital trust. Encouraging both government and private investments to build and improve national data centers that meet top standards is essential to ensure there is enough storage and computing power for widespread use of AI.

The conference suggested organizing "sectoral clouds," tailored to specific areas such as health, education, and public services, while aligning with the unique needs of each sector. A regulatory authority oversees federated architecture that links the clouds, ensuring coherence, security, and interoperability among the various platforms.

4.4. Securing Technical Foundations and Promoting Technological Autonomy

In addition to physical infrastructures, ensuring technical control necessitates the implementation of protective measures for the source code of essential systems. Advancing national open-source AI serves as a strategic avenue to enhance technological independence, foster local utilization of AI tools, and create a robust ecosystem.

The participants recommended investing in the training and certification of technical talents. Establishing national skill hubs focused on cybersecurity, cloud, AI, and DevSecOps has become essential, supported by universities and research centers, to guarantee a robust local foundation of critical expertise. The goal is to establish sustainable technological independence, which depends equally on human expertise and physical infrastructure.

V. HUMAN SKILLS, RESEARCH, AND INNOVATION: THE ESSENTIAL DRIVERS OF THE MOROCCAN AI ECOSYSTEM

These elements are the fundamental forces behind a remarkable AI, capable of creating value, sustainable and high-quality jobs, and fostering endogenous innovation. The effectiveness of the AI strategy is fundamentally reliant on the extensive and focused cultivation of talent, the caliber and influence of research, and Morocco's capacity for local innovation.

5.1. Developing Talents: The University and Professional Training Institutions at the Core of Education for the AI Era

The success of a national AI strategy hinges significantly on human competence. Universities and vocational training institutions serve as essential foundations in this matter. Their main objective is to influence the future academic and professional landscape while cultivating the necessary talents across all tiers, from engineers to technicians and from researchers to professionals.

The conference highlighted the importance of thoroughly adapting academic programs across all levels, both initial and continuing. Key structural elements encompass aligning curricula, fostering interdisciplinarity, and supporting doctoral mobility. Integrating AI and its challenges into all academic disciplines is highly advisable.

Raising awareness among young generations about the technical, ethical, and social issues of AI from an early age is essential. It is crucial to guarantee that AI learning is accessible to every learner, irrespective of their area of study, and implemented across various disciplines.

The lack of skills and training among teachers in AI has been recognized as a major challenge, necessitating focused programs to equip them with the ability to utilize digital tools and effectively integrate, guide, and create innovative pedagogical devices using AI.

The departure of national talent to other countries poses a serious threat, suggesting that it's time to establish a compelling environment

that retains AI talent in Morocco and promotes the return of expertise from the scientific and professional diaspora.

Multiple speakers argue for fostering a widespread culture of AI across all university programs to equip a generation of more adept professionals and decision-makers. The adaptation of educational programs, ongoing training for educators, and the engagement of interdisciplinary expertise are essential. The strategies encompass enhancing working conditions, incorporating national strategic projects, gaining institutional recognition, and providing leadership opportunities in AI research.

5.2. Developing and Structuring Research and Promoting Local Innovation: Transition from Consumption to the Production of Tailored AI.

Research in artificial intelligence is essential for generating local value and fostering home-grown innovation. Creating joint laboratories, developing collaborative platforms, and enhancing public-private partnership research are crucial for resource pooling, cost optimization, and speeding up applied innovation. It is advisable to promote centers of excellence in AI research and establish skill hubs specifically tailored for doctoral students.

The engagement of the Moroccan scientific diaspora presents a valuable opportunity to embrace. Working in close partnership with top global universities and drawing in international talent is an essential approach to foster innovation and enhance knowledge transfer.

The talks drove home the need to move from just using imported AI solutions to encouraging innovation and local production, creating original solutions that can be exported and are suited to the cultural, language, and economic differences of Morocco and Africa.

The shift towards a more inclusive digital transition necessitates a reevaluation of the connection between fundamental research and innovation. It requires enhanced collaboration among universities, technical institutes, and deep tech startups to guarantee the ongoing production of knowledge, the development of prototypes, and the process of commercialization. The emergence of regional artificial intelligence innovation centers has the potential to distribute knowledge creation, improve local resources, and amplify their influence on surrounding communities.

5.3. Adapting Skills and Training Models for Jobs Impacted by AI

The influence of AI on the workplace and the swift transformation of employment is significant. A rapid and substantial transformation of the educational system, along with ongoing training methods, is essential. Equipping every citizen for the age of AI presents a significant national challenge.

The learning model is significantly transformed, highlighting the necessity to foresee the development of skills such as creative thinking, complex problem-solving, and proficiency with advanced digital tools. Addressing the potential effects on employment, which will involve job losses in certain sectors alongside the emergence of various new roles (such as prompt engineer, algorithmic curator, AI director, etc.), presents a considerable challenge that necessitates a forward-thinking support strategy, reskilling initiatives, and ongoing training opportunities.

The importance of dynamic mechanisms for monitoring changes in the employment sector has been highlighted, especially the establishment of sectoral units to track skill developments in real-time, the collaboration among universities, professional training providers, professional associations, and local authorities, and the encouragement of digital inclusion through hybrid training formats tailored for young people, women, and remote communities, ensuring a clear digital transition and social cohesion.

VI. AI, CATALYST FOR TRANSFORMATION: SECTORAL PERSPECTIVES FOR AN OBVIOUS AND INCLUSIVE IMPACT

The inaugural national conference on artificial intelligence (AI) convened representatives from all key sectors impacted by ongoing transformations, making it the first gathering of this magnitude. This group discussion highlighted how AI is linked to many different fields, such as health, education, justice, agriculture, culture, and finance, and how it can help create better, more inclusive, and more flexible public policies. AI presents a considerable opportunity; however, its effective implementation relies on shared systemic factors, including data structure and quality, system interoperability, skill development, social acceptability, and ethical governance. Every sectoral round table focused on issues, priorities, specific tensions, and particular use cases associated with AI. The aim is not to replicate models but to create customized trajectories that reflect the operational, institutional, and social realities of each sector.

6.1. Transformation of Public Administration: Toward Intelligent, Efficient, and User-Centric Public Services

In the digital era, public administration needs to transform its approaches to satisfy citizens' increasing expectations for simplicity, speed, and transparency. Artificial intelligence (AI) provides distinct viewpoints for reevaluating administrative processes, tailoring them to the lives of users instead of adhering to rigid hierarchical frameworks. AI can automate repetitive tasks, enhance the predictability of public management, and identify anomalies and fraud at an earlier stage. The challenge is rooted in an initiative-taking and inclusive approach that centers on the citizen's experience. To accomplish this transformation, various conditions have been recognized: interoperability of information systems, quality, governance, and data traceability.

AI should depend on trustworthy, current data, utilized in an ethical and accessible manner, guaranteeing transparency, accountability, respect for human rights, and safeguarding against unauthorized or commercial exploitation of data. Human agents play a pivotal role, requiring education in the ethical use, limitations, and management of these technologies. The strategy seeks to enhance public services, minimize administrative hurdles, transform human contributions, and foster listening, foresight, and effectiveness. The aim is more political than technological, positioning AI to modernize the relationship between the state and its citizens.

6.2. AI and Public Health: Better Prevention, Better Diagnosis, Better Care for All

In Morocco, public health serves as a pivotal area for the application of artificial intelligence, given its significant human implications and the potential for comprehensive transformation. AI provides significant opportunities to reconsider prevention strategies, enhance responses to health emergencies, more effectively identify at-risk populations, and improve the allocation of resources. The concept of creating specialized governance for AI in healthcare has gained significant traction to guarantee consistency of actions, align with public health priorities, and offer ethical oversight.

The discussions highlighted an “augmented care” model in which AI enhances the abilities of professionals, allowing for improved analysis, anticipation, and human interaction without replacing them. AI has the potential to elevate care quality, boost patient safety, and reclaim valuable time in the medical field.

The digital transformation of the healthcare sector represents a significant evolution of skills, with the ongoing training of healthcare professionals serving as a crucial mechanism to foster digital acculturation and facilitate the adoption of AI tools, all while upholding medical ethics and maintaining human connection. The matter of social acceptability and ethical oversight influenced all the interventions. For AI to advance in the health sector, it is essential to create a foundation of trust that hinges on algorithmic transparency, stringent safeguarding of personal data, and an initiative-taking stance against all forms of discrimination or algorithmic exclusion.

6.3. AI in the Service of Agriculture and Fisheries: Strengthening Food Sovereignty and Resilience in the Face of Climate Challenges

Key areas for the Kingdom's food sovereignty, including agriculture and fisheries, stand to gain from AI in tackling major challenges like the ongoing water and climate stress experienced recently. AI facilitates the execution of precision agriculture, including irrigation and targeted fertilization; enhances the optimization of input usage, such as water and fertilizers—with specific instances of notable reductions and observed yield improvements—boosts overall yields, and speeds up the shift towards more sustainable practices. The challenges encompass the effective integration of smallholders amidst technological complexity and expenses, the management and secure sharing of sensitive agricultural data, and the absence of inter-institutional coordination between water and agriculture.

Artificial intelligence (AI) serves as a tangible instrument to enhance the efficiency of the agricultural and forestry sectors within a climatic context. AI has the potential to enhance yield forecasts by utilizing soil, hydrological, and climatic data; optimize water resource management through predictive irrigation and fertilization systems; and enable early identification of plant diseases or stress. AI can assist in forecasting stock trends, identifying fishing locations, and enhancing capture strategies in the forestry industry. Nonetheless, the broad implementation of AI encounters obstacles, including technological intricacies, associated costs, the regional digital divide, and limited interoperability. Adapting AI solutions to local realities is essential. The management of agricultural and forestry data is an additional area of concern. The influence of AI relies on the capacity of public policies to foster alignment among agricultural, water, fisheries, and climate initiatives. AI has the potential to drive integrated governance by harmonizing investments, information systems, and performance indicators with territorial resilience and sustainable food security.

6.4. AI and FinTechs: Catalysts of Innovation for Enhanced Inclusion and Financial Security

The round table on artificial intelligence (AI) and FinTechs emphasized the innovative dynamics that are transforming the Moroccan financial landscape, with a focus on digital transformation, inclusion, and regulation.

L'IA est perçue comme un accélérateur technologique, un outil de renforcement de la confiance, la personnalisation des services et la sécurité des transactions. Les échanges révèlent plusieurs déploiements concrets de l'IA, notamment l'amélioration des mécanismes de détection de la fraude, la notation de crédit à l'aide de modèles algorithmiques et l'adaptation dynamique des produits financiers aux profils des utilisateurs. Cependant, le potentiel réside dans un environnement encore en construction, avec le clonage des données, l'absence de normes ouvertes pour le partage d'informations et les limitations d'accès auxquelles sont confrontées les jeunes fintechs. La mise en œuvre progressive

d'un système banPeople view AI as a potent instrument that boosts trust, customizes services, and guarantees safe transactions. The discussions highlight various tangible applications of AI, such as enhancing fraud detection systems, utilizing algorithmic models for credit scoring, and the flexible adjustment of financial products to align with user profiles. Nonetheless, the opportunity exists within a landscape that is still being developed, characterized by data cloning, a lack of open standards for information exchange, and access challenges encountered by emerging FinTechs.

The phased introduction of an open banking system stands as a strategic priority, necessitating accurate consent mechanisms, data portability, and oversight of algorithms. The regulatory framework is viewed as a dual necessity: maintaining the stability of the financial system while promoting innovation.

The lack of hybrid profiles that integrate AI with financial services restricts the growth of local

FinTechs and constrains their capacity to develop customized products. Experts consider the creation of specialized training programs in collaboration with universities, incubators, and large companies to be a significant structural challenge. The development of a sustainable Fintech ecosystem necessitates strong collaboration among regulatory bodies, private entities, startups, and financial institutions, with a focus on responsible innovation, accessibility of services, and transparency in algorithms.

6.5. AI and Creative and Cultural Industries (CCI): Reinventing Creation, Protecting Artists, and Valuing Heritage

AI provides fresh viewpoints to expand the range of actions, revitalize media formats, and increase the visibility of Moroccan cultural expressions, especially among youth and in frequently isolated regions. However, significant legal, economic, and ethical challenges accompany this transformation. The discussions have highlighted the necessity to reevaluate the structure of copyright concerning works created or aided by AI, as the distinctions between human creativity, algorithmic support, and machine independence are becoming increasingly indistinct. The matter of authorship, ownership, and fair compensation for artists in the digital landscape is a vital concern for maintaining equity and the economic sustainability of the sector. Cultural sovereignty has influenced exchanges, leading to many AI-generated representations that frequently diverge from local realities. One key objective is to promote Moroccan heritage. However, only if struc-

tural effects accompany these advancements will they truly enhance the Moroccan cultural fabric. The recommendations propose a national strategy for AI and ICC that includes intersectoral governance, funding for digital initiatives, support for startups and cultural NGOs, linguistic inclusion, dissemination of local work, and the establishment of a public-private center focused on cultural AI.

6.6. AI and Sports: Revolutionizing Performance, Training, and Sports Experience

Morocco is actively working to transform its sports ecosystem into a hub of excellence. Artificial intelligence (AI) plays a crucial role in enhancing sports performance, especially in areas such as biomechanical analysis, training plans, injury prevention, and strategic competition simulation. AI is emerging as a partner in achieving high performance, merging data science with athletic excellence. Additionally, it transforms the methods of identifying and nurturing talent, facilitating the creation of training areas and expanding the reach of elite sports. AI plays a significant role in organizing and planning events, promoting social inclusion, enriching the spectator's experience, and shaping a technological image of the country. Content creators and athletes see e-sports as a key avenue for innovation and value generation. Nonetheless, the obstacles encompass the ethical utilization of sensitive data, regional access to AI tools and infrastructures, and the shortage of individuals trained in sports governance, data, and technologies. The suggested structural guidelines encompass the establishment of a natio-

nal observatory for AI and sports, the extensive incorporation of AI training within sports curricula, the enhancement of sports infrastructures with connected and intelligent tools, and the formulation of a regulatory framework for the application of AI in sports.

6.7. AI and Industrial Decarbonization: Accelerating the Energy Transition and Meeting International Commitments

Artificial intelligence (AI) is emerging as a pivotal instrument for transforming industrial models, minimizing carbon emissions, and enhancing energy efficiency worldwide.

AI extends beyond mere technical optimization; it is evolving into a fundamental component of sustainable reindustrialization, playing a vital role in processes, applications, and energy governance.

AI has the capability to simulate and enhance energy performance, predict greenhouse gas emissions, automate efficiency diagnostics, and assist in the electrification of transportation and industrial locations.

It also contributes to the effective management of renewable energy projects, water resource management, and the enhancement of critical digital infrastructures.

The integration of AI with energy transition creates a novel industrial environment where localized and sustainable AI emerges as a key element of competitiveness.

Nonetheless, this ambition encounters structural limitations, including access to appropriate IT infrastructures and challenges in aligning technological innovation with environmental regulations and sustainable economic models, especially for smaller industrial entities. Various approaches have been suggested to tackle these challenges, such as establishing a national strategy that aligns with climate and digital priorities, enhancing the quality and sovereignty of industrial data, creating AI solutions for energy optimization and managing carbon-neutral flows, and bolstering

the skills of professionals who can design, implement, and secure these technologies.

6.8. AI and Public Security: Strengthening Foresight, Prevention, and Operational Efficiency

Artificial intelligence (AI) is becoming a pivotal tool for reimagining public safety, providing avenues to foresee risky behaviors, predict criminal activities, enhance emergency responses, and foster better coordination among security agencies. AI facilitates the management of extensive unstructured information, allowing for real-time analysis of current issues. Nonetheless, the application of AI in security presents challenges related to digital sovereignty, fundamental freedoms, and the security of systems.

A national governance focused on security AI has been contemplating how to tackle these challenges, involving a fourfold collaboration among public institutions, the private sector, academia, and civil society.

This governance must guarantee strict operational performance and consistent human oversight, especially in automated decision-making processes.

The security of systems depends on a cohesive strategy that merges cybersecurity, sovereignty, and ethical design. Essential principles include security and privacy by design, as well as zero trust by design.

Additionally, certification mechanisms and improved system resilience through security operations centers are crucial.

Social acceptance plays a vital role, emphasizing the need to educate citizens about the goals, constraints, and assurances associated with the use of AI in security. Ultimately, it is important to promote responsible experimentation, including "proof of concept" environments, to evaluate AI solutions under real-world conditions while safeguarding fundamental rights and ensuring algorithm traceability.

6.9. AI and Education "Outside University": Extending Pedagogical Transformation

In addition to higher education, AI plays a transformative role in various other segments of education and training, including primary, secondary, and vocational levels.

Minister of National Education, Mr. Mohamed Saad Berrada, shared specific instances of AI applications within the education sector. These include automating absence recordings to address school dropout rates, analyzing dropout causes through data, planning teacher and school needs, offering personalized remediation via AI tutors ("Teaching at the Right Level"), and enhancing communication with parents regarding absences or academic results.

AI can significantly enhance the customization of education and ongoing training. The conversations centered around use cases, challenges, and recommendations tailored to non-university education.

Mr. Younes Sekkouri, the Minister of Economic Inclusion, Small Business, Employment, and Skills, spoke about the value of vocational training and the need to adapt curricula to incorporate AI skills, referencing efforts made across over 200 sectors.

These initiatives reflect the overarching vision advocated by Mrs. Amal El Fallah Seghrouchni, which seeks to utilize AI as a tool for social justice. They promote fair access to opportunities and resources, especially by allowing populations in remote areas or vulnerable groups to benefit from enhanced quality public services and more straightforward access.

The two round tables on AI in education outlined the necessary conditions for responsible, effective, and equitable deployment. They highlight the importance of placing teachers at the center of the ecosystem as designers, facilitators, and protectors of learning quality.

AI is utilized in primary and secondary education to enhance personalization, adapt content, and automate repetitive tasks. In situations of limited connectivity, hybrid solutions are recognized to promote territorial equity.

AI is utilized in vocational training to ensure content meets market demands, enhances learning via simulation, and aids in retraining for industries undergoing change. It is essential to create educational content in national languages, including Arabic, to maintain cultural and linguistic significance.

6.10. AI and Media: New Tools, New Ethical and Trust Challenges

AI is transforming journalism and media through the automation of certain editorial tasks, speeding up audiovisual production, and bringing forth innovative formats like AI-generated avatars and synthesized podcasts. This evolution presents chances for enhanced productivity, tailored content, and a reimagining of narratives.

Nonetheless, this technological revolution presents ethical, editorial, and societal challenges. As misinformation and deepfakes proliferate, the challenge of differentiating between truth and falsehood intensifies, threatening social cohesion and undermining public trust.

The recommendations from the roundtable highlight the importance of reaffirming journalistic ethics and the necessity to "rehumanize" the application of AI in journalism.

They call attention to the need for targeted and initiative-taking regulations to guarantee the reliability of content, safeguard data, and uphold the democratic function of the media.

They propose the adoption of sovereign clouds and open-source solutions to diminish technological reliance and enhance the nation's digital sovereignty.

6.11. The Moroccan Ecosystem: A Dynamic of Innovation to Actively Support

The vibrant Moroccan AI ecosystem, especially the dynamic startups highlighted at the AI Startup Village, acts as a crucial catalyst. Mr. Chakib Alj, the President of the CGEM, commended this dynamic and Morocco's ability to innovate. The Minister of National Education, Mr. Mohamed Saad Berrada, provided a clear example by selecting approximately twenty startups that included an equal mix of Moroccan and foreign entities, all focused on developing AI prototypes for the education sector.

Despite the challenges identified, including restricted access to funding and data, the ecosystem highlights robust entrepreneurial momentum and a readiness to innovate at the local level.

The recommendations seek to organize and enhance this support via dedicated mechanisms such as national directories, targeted financing, and support programs. They also aim to promote an approach to AI production that is specifically aligned with Morocco's unique needs, moving beyond simply consuming imported technologies. The emphasis on attracting both public and private investment to enhance the funding of startups and innovation was a key focus.

Mr. Mohamed Kettani, President of Attijariwafa Bank, highlighted that financing technological startups carries a "very high risk" and is not sufficiently supported by current mechanisms. He urged the government to develop a national strategy that enhances capacities and increases dedicated funds.

VII. MOROCCO AS A GLOBAL AI ACTOR: INTERNATIONAL POSITIONING AND STRATEGIC COOPERATION

Morocco asserts its position as a committed actor in the globalized landscape of AI, which is marked by intense competition among world powers and fragmented regulations, actively advocating for coordinated, ethical, and inclusive global governance. Furthermore, AI has been described as a "major technological revolution" that, despite its "enormous benefits," "simultaneously induces ethical, security, and military risks" exacerbated by the "lack of international governance capable of regulating" its uses. Moreover, the current situation has been described as a "race for artificial intelligence," particularly regarding investment and regulation.

7.1. Morocco: A Committed Actor for Balanced and Fair Global AI Governance

The Kingdom actively engages in international dialogues on AI governance via its balanced and initiative-taking diplomacy. Mr. Omar Hilale stated that, with different countries having various rules and priorities (some focusing on innovation without regulations and others pushing for strict government control), the solution to managing the negative effects lies in working together internationally. He characterized it as "essential," "critical," and a "valid request of developing nations," which must be comprehensive, stringent, uphold human rights, and be founded on openness, fairness, inclusion, and responsibility.

Moreover, Morocco, in its endeavor to establish itself as a leader in Africa, established the International Center for Artificial Intelligence of Morocco (AI Movement) in 2021, a research and development facility aimed at becoming a regional hub for artificial intelligence on the African continent. Consequently, it was declared a Category II UNESCO facility in November 2023. This indicates that AI Movement has been acknowledged as a center of excellence in artificial intelligence and data sciences at the continental level in Africa.

In 2022, Morocco was one of the first nations to start compliance with the UNESCO guideline on the ethics of artificial intelligence (AI) by establishing a national steering committee. In this regard, Morocco has implemented a pilot study to evaluate its preparedness for artificial intelligence.

The co-authorship of the inaugural UN resolution on AI (2024) with the United States and its co-presidency of the Group of Friends on AI at the UN exemplify this leadership and the commitment to shaping global standards that are more inclusive, culturally respectful, and advantageous to developing nations. The aspiration to hold the Global AI Summit in 2027 solidifies this stance and the intention to establish a prominent international role.

7.2. South-South Cooperation: A Strategic Priority for Morocco Aimed at Reducing the Digital Divide and Promoting Inclusive AI in Africa

South-South cooperation is a primary focus for Morocco, particularly with artificial intelligence, since it tackles prevalent concerns encountered by Southern nations, like the digital divide, inadequate infrastructure, talent deficits, and obstacles in securing finance. The dialogue underscored the ongoing existence of a "growing digital divide" and disparities in investment, resulting in most poor nations being "far behind" in the "AI race." Africa, however, confronts a "severe deficiency in digital infrastructure," a "shortage of talent," and "AI models that are inappropriate" for local circumstances.

Bringing together resources, sharing knowledge, and improving AI models that fit local needs are essential for closing the digital gap in Africa and promoting fair and inclusive AI across the continent.

Ms. Amal El Fallah Seghrouchni, the Minister Delegate for Digital Transition and Administrative Reform, emphasized that artificial intelligence encompasses not only technology but also the necessity for control and autonomy.

She affirmed Morocco's commitment to developing an African AI that embodies the continent's cultural values and is receptive to responsible collaborations, establishing Morocco as a "center for regional dialogue, a repository of best practices, and a robust advocate for enhancing the skills and resources of neighboring nations through equitable and trustworthy South-South cooperation."

A plenary session emphasized the Arab-African dialogue and the need for enhancing regional digital sovereignty and integrated economic chains. The suggestions seek to enhance regional government, expedite the implementation of appropriate infrastructures, and foster innovation via strategic collaboration and initiative-taking diplomacy.

The Minister Delegate proposed a realistic approach to international collaboration in response to the issues posed by insufficient infrastructure and AI models that do not align with local circumstances.

She advocated for the identification of "tractable small-scale collaboration models" to expedite development, preferably at the regional level with many nations, rather than awaiting the protracted global governance procedures that need "considerable time."

These collaborative initiatives will facilitate the exchange of data and models, enabling the amplification of various national solutions customized to address the region's own difficulties, such as water scarcity or localized agriculture concerns.

A reflection occurs after promoting agile regional collaboration regarding the specific forms that this technological solidarity may take.

The establishment of "South-South AI laboratories"—platforms for collaborative research, infrastructure sharing, and testing across African nations—has surfaced as a viable operational strategy.

These efforts would facilitate investment aggregation, the creation of representative datasets, and the development of AI in local languages, while promoting communal skill enhancement.

Morocco's digital diplomacy and existing connections position it to spearhead this initiative and enhance the continent's impact in global AI discussions.

VIII. ELEMENTS OF AN AI ROADMAP IN MOROCCO: SYNTHESIS OF CROSS-CUTTING CHALLENGES AND THE EIGHT FUNDAMENTAL PILLARS FOR ACTION

The diverse thematic and plenary sessions have facilitated a thorough analysis during the First Forum, leading to a clear understanding of the major challenges the Kingdom needs to address to achieve success in its AI strategy. The interrelationship between these challenges requires a thorough and cohesive strategic approach.

8.1. Identification of Structural Cross-Cutting Challenges: The Obstacles to Overcome to Unlock the Potential of AI

All sectors and application domains share the following primary cross-cutting challenges:

- 1. Governance and Coordination:** Create a robust multi-stakeholder governance framework, facilitate intersectoral collaboration, and develop a shared and actionable strategic vision.
- 2. The Trust Framework:** Establish a strong, flexible, and perpetually resilient legal, ethical, and cybersecurity landscape that ensures data protection and upholds digital sovereignty.
- 3. Skills and talents:** Significantly enhance skills across all levels, modify training systems, and draw in and keep talent amid global competition.
- 4. Sovereign Digital Infrastructures:** Make substantial and swift investments in high-performance computing capabilities, sovereign data centers, and nationally managed ultra-high-speed connectivity.
- 5. Financing and Innovation:** Secure the essential financial resources for research and development, provide support for startups, and facilitate large-scale deployment, thus encouraging the growth of local AI production.
- 6. Adoption and Transformation:** Addressing resistance to change, facilitating the transformation of organizations and professions, and ensuring societal acceptance.

7. International Cooperation: Navigating a complex global landscape, enhancing multilateral collaboration, and prioritizing South-South cooperation.

8. Digital and Social Inclusion: Bridging the digital and territorial divide, guaranteeing fair access to technologies and the advantages of AI for every citizen.

8.2. The Eight Strategic Pillars: An Ambitious and Pragmatic Roadmap for Action

The conference has pinpointed the key strategic directions that will shape Morocco's forthcoming National Artificial Intelligence roadmap, thanks to the thorough examination of these challenges and the valuable recommendations derived from extensive efforts. The orientations form the eight pillars of a comprehensive and practical roadmap aimed at establishing Morocco as a significant player in trusted AI. For each pillar, future actions will concentrate on the following areas:

- 1. Build a solid base of trust and flexible, ethical governance:** This means setting up a system of rules and laws that can quickly adjust, supports trying new ideas, creates ways to certify practices, promotes ethical behavior (like charters and audits), and improves cybersecurity at every level.
- 2. Invest significantly and responsibly in essential and sovereign digital infrastructures:** This involves implementing focused AI solutions to mitigate territorial and social disparities (rural/under-resourced areas). Ensuring access to technologies and the advantages of AI for

all citizens is essential, particularly for vulnerable populations or those distanced from digital technology. It is also important to tailor the tools to accommodate cultural and linguistic specificities.

3. Cultivate Human Expertise to Excel in AI: Initiate a comprehensive national strategy for foundational and ongoing AI education across all levels and sectors, thoroughly revise academic and professional programs, and draw in and keep talent by fostering an appealing environment.

4. Encourage Innovation and Local AI Development: Actively support applied research and development, organize and finance the local AI startup ecosystem, and nurture the creation of unique and exportable AI solutions designed to meet the specific needs of Morocco and Africa.

5. Secure funding and accelerate the broad adoption of AI: Get the needed money from different sources (like government funds, partnerships between public and private sectors, government tech funds, and private investments), help AI projects (especially startups) find funding, and promote the quick use of AI solutions in important areas with a lot of potential.

6. Enhance Morocco's international standing and foster leadership in South-South cooperation: Get involved in creating global AI standards with organizations like the UN, promote fair and inclusive AI governance, and work closely with African countries to reduce the digital

gap and share effective practices and customized solutions.

7. Promote Inclusion and Equity in Access to AI: This involves implementing focused AI solutions to mitigate territorial and social disparities (rural/under-resourced regions). Ensuring access to technologies and the advantages of AI for all citizens is essential, particularly for vulnerable or digitally isolated populations, and it is important to tailor the tools to cultural and linguistic nuances.

8. Transition Decisively to Concrete and Measurable Action: This entails prioritizing the swift initiation of impactful pilot projects that have proven successful, launching large-scale deployments in key sectors, and setting up accurate monitoring and evaluation systems (international indicators) to refine the strategy and consistently assess progress.

Implementing these pillars efficiently, collaboratively, and swiftly is crucial for the success of the national strategy and for the Kingdom's goal of becoming a trusted leader in AI development.

IX. GENERAL CONCLUSION: FROM STRATEGIC REFLECTION TO THE REALIZATION OF MOROCCO'S AI AMBITION

The First National Artificial Intelligence Conference, successfully organized under the High Patronage of His Majesty King Mohammed VI, May God Assist Him, represented a moment of paramount importance and a decisive turning point for the digital future of the Kingdom. They achieved their goals by bringing together everyone involved, identifying the key challenges, and setting out the main plans for creating a bold, ethical, inclusive, and independent national AI strategy.

9.1. A Shared Diagnosis and Clear Strategic Orientations

The strong convergence of visions, the richness of exchanges, and the observed dynamics of collaboration testify to the maturity of the Moroccan ecosystem and its determination to seize the opportunity offered by AI. A precise diagnosis of the challenges was established, defining eight strategic pillars that now constitute the preliminary roadmap for future action. These pillars and the resulting strategic orientations were formally adopted and presented as the significant conclusions of the Conference during the closing ceremony, marking the national commitment.

9.2. The Imperative of Concretization and Coordinated Action

The vitality of local innovation (illustrated notably by the AI Startup Village) and the formalization of significant strategic partnerships attest to a firm commitment to move from the reflection phase to concrete action and to collectively build the future of AI in Morocco. The phase that is now opening is that of the rapid and coordinated implementation of these strategic orientations. The call to action was a central message of the closing speech, emphasizing the Kingdom's commitment to moving from recommendations to concrete and measurable implementation.

9.3. Conditions for Success: Agile and Resilient Governance, Multi-Stakeholder Collaboration, and Targeted Investments

The practical implementation of the eight pillars will require strengthened, agile, and resilient governance; close and constant collaboration among all stakeholders (government, private sector, academic world, and civil society); targeted and massive investments; and rigorous monitoring and evaluation of priority programs and projects, based on clear and precise performance and impact indicators.

9.4. The King's Ambition: AI at the Service of the Kingdom's Progress and Its Influence

The goal is to fully capitalize on the positive momentum generated by the conference to make AI a powerful catalyst in the service of the progress of all Moroccan citizens and the Kingdom's influence.

Morocco is passionately committed to making artificial intelligence a fundamental lever to accelerate its development, strengthen its digital sovereignty, and build a fairer, more inclusive, and more prosperous future. This ambition aligns with the vision of an "AI of general interest" centered on citizens and values, as highlighted by Mr. Martin Tisné from Current AI. The perspectives opened by this conference are immense, and the Kingdom's determination to realize them is totally guided by the vision of AI at the service of humanity and society.

Mrs. Amal El Fallah Seghrouchni, the Minister Delegate in charge of Digital Transition and Administrative Reform, pointed out that the true success of AI projects should be judged not by how many technical achievements or platforms there are, but by how much they help create digital fairness, build trust among citizens, and support the country's ability to make its own decisions.

She strongly reaffirmed that Morocco is resolutely committed, under the enlightened leadership of His Majesty King Mohammed VI, may God assist him, to move toward a responsible, supportive, and innovative digital future. The conclusions of the Conference and the recommendations presented thus form the foundation of this forward march, making artificial intelligence an essential lever in the service of the Kingdom's progress and influence. *de Sa Majesté le Roi Mohammed VI, Que Dieu L'Assiste, à avancer vers un avenir numérique responsable, solidaire et innovant. Les conclusions des Assises et les recommandations présentées constituent ainsi le fondement de cette marche en avant, faisant de l'Intelligence Artificielle un levier essentiel au service du progrès du Royaume et de son rayonnement.*

X. STRATEGIC CONVENTIONS SIGNED: THE FIRST ACTS OF IMPLEMENTATION OF THE CONFERENCE

The First National Artificial Intelligence Conference was not limited to strategic reflections and dialogues. They showed a strong promise to take action right away on the ideas discussed; the Minister Delegate for the Head of Government in Charge of Digital Transition and Administrative Reform officially signed several important agreements and memoranda during the event or at the closing ceremony.

These commitments constitute the first concrete milestones of the roadmap resulting from the Assises, sealing key partnerships between her ministry and other stakeholders in the national and international ecosystem, covering a wide range of strategic areas for the development of AI in Morocco.

These conventions and memoranda of understanding were signed with:

- > The Ministry of National Education, Preschool, and Sports: Integrating digital technology and AI into the educational and sports system, developing educational digital content, and supporting digital innovation in schools and sports environments.
- > Ministry of Economic Inclusion, Small Business, Employment, and Skills (MEISBES): signing of a memorandum of understanding aimed at promoting the use of artificial intelligence and digital technology to strengthen economic inclusion, employability, and skills development.
- > The Ministry of Energy Transition and Sustainable Development: For the establishment and development of sustainable, high-performing, and sovereign digital infrastructures, in line with energy and climate challenges (Green Data Centers).
- > The Digital Cooperation Organization (DCO) aims to develop cooperation, facilitate access to funding for digital projects, and participate in initiatives that strengthen the digital ecosystem.
- > The UNDP (United Nations Development Program) is working on the D4SD (Digital for Sustainable Development) initiative to help improve digital access in the Arab region and Africa, especially by using AI and data science in public services, building digital skills, innovating health systems, and encouraging cooperation between countries in the Global South.
- > Current AI (a global initiative) aims to strengthen international cooperation around transparent, responsible, and beneficial AI, particularly emphasizing Moroccan engagement in linguistic diversity, health, and accountability.
- > The Agricultural Credit: Through a specific agreement focused on digital inclusion in rural areas, this initiative aims to strengthen access to digital services for rural and peri-urban populations, support farmers, promote rural innovation (Agritech), and reduce territorial disparities.
- > UM6P aims to formalize a strategic partnership focused on data centers while promoting collaboration in research, innovation, training, and digital sovereignty.
- > The creation of the AI Jazari Institute: A memorandum of understanding co-signed by the Ministry of Digital Transition, also involving the Ministry of Higher Education, Scientific Research, and Innovation. It also includes territorial actors from the Oriental Region (the Wali, the Governor of Nador, and the President of the Regional Council). This institute is dedicated to AI research, training, and innovation in the Province of Nador.

These signatures attest to the effective mobilization of the ecosystem under the strong impetus given by the Ministry of Digital Transition. They mark the beginning of the operational phase of Morocco's AI strategy, translating the dynamics of the conference into measurable commitments and covering a wide range of strategic domains.

XI. FORMAL CLOSING CEREMONY: THE STARTING POINT FOR ACCELERATED ACTION BY ARTIFICIAL INTELLIGENCE

The solemn ceremony officially concluded with the First National Artificial Intelligence Conference, marking the culmination of the work and the reaffirmation of commitments made at the highest level of the state. In the presence of high-ranking government officials, private sector leaders, academics, and international experts who contributed to the discussions, the closing ceremony highlighted the event's success, the richness of the exchanges, and the relevance of the strategic orientations that emerged.

This significant moment was marked by the speech of the Minister Delegate Amal EL FAL-LAH SEGHROUCHNI, who synthesized the rich exchanges of the two days and formally presented the major conclusions and strategic recommendations resulting from the work of the Conference.

She highlighted the strength of the collective mobilization of the national ecosystem and the convergence of visions around Morocco's ambition in AI. This ceremony thus served as an occasion to reaffirm the Kingdom's resolute commitment to capitalize on the positive dynamics of the Conference to quickly develop and implement a national AI strategy.

Under the high leadership of His Majesty the King, may God assist him, the closing ceremony marked a decisive turning point, symbolizing the transition from the reflection and consultation phase to a phase of concrete action. The conclusions and directions from the conference, officially shared by the minister delegate, represent this fresh start, kicking off a faster change using artificial intelligence to support progress and independence in Morocco.

XII. FORMAL CLOSING ACT: MESSAGE OF HOMAGE AND GRATITUDE FROM PARTICIPANTS TO HIS MAJESTY THE KING

A moment of particular significance during the formal closing ceremony: all the First National Artificial Intelligence Conference participants wished to send a collective message of homage, gratitude, and loyalty to His Majesty King Mohammed VI. May God assist him.

This solemn message, delivered by the Minister Delegate Amal EL FALLAH SEGHROUCHNI, expressed the profound gratitude of all the vital forces of the Nation gathered for this conference (representatives of the Government, the private sector, the academic and research world, and civil society, as well as invited international experts and personalities) for the Very High King's Patronage granted to this significant event.

This patronage was unanimously recognized as the essential foundation for the success of the national dialogue/debate and a sign of the paramount importance that His Majesty the King, may God assist him, places on artificial intelligence for the future of the Kingdom.

The message also reaffirmed the complete alignment and support of the participants with the enlightened vision of His Majesty the King, may God assist him, which positions Morocco among the pioneering nations in the digital field and makes digitalization a strategic

choice to strengthen the Kingdom's competitiveness and build the Morocco of skills. The participants emphasized that the conference has concretized this vision by being an open space to share knowledge, exchange expertise, and launch concrete initiatives, aligning AI with sustainable development objectives, social and territorial justice, and the New Development Model.

In conclusion to their message, the participants renewed their unwavering loyalty and pride in the King's Vision that makes artificial intelligence and digital transformation a central pillar of national development, committing to work collectively toward realizing this ambition.

This tribute message is an important official step after the conference, showing the shared dedication of the Moroccan ecosystem and its partners to the King's push for AI that benefits everyone.

برقية تقدير وامتنان مرفوعة إلى حضرة صاحب الجلالة الملك محمد السادس نصره الله وأيده من لصرف المشاركين والمشاركات في المناظرة الوصية حول الذكاء الاصطناعي

بسم الله الرحمن الرحيم، والصلاة والسلام على سيدنا محمد أشرف المرسلين،
حضرة صاحب الجلالة والمقابلة الملك محمد السادس، ملك المملكة المغربية،
السلام على جنابكم العالي الشريف، ومقامكم السامي المنيف، حفظكم الله وأعز أمركم.
يتشرف المشاركون والمشاركات في المناظرة الوصية حول الذكاء الاصطناعي، المنظمة تحت شعار: "استراتيجية
فعالة وأخلاقية للذكاء الاصطناعي في خدمة مجتمعنا" والمنعقدة بمدينة الرباط يومي 1 و2 يوليوز 2025، بأن يرفعوا إلى
مقامكم العالي بالله، أسامي عبارات الشكر والعرفان والامتنان، على رعايتكم المولوية السامية لهذله المناظرة الوصية
الكبرى التي تنكح في صميم رؤيتكم المتبصرة لجعل المغرب في مصاف الدول الرائدة رقمياً، وترجمة للتوجيهات الملكية
السامية الداعية إلى اعتماد الرقمنة خياراً استراتيجياً لبناء مغرب الكفاءة وتعزيز تنافسيته وجاليته.

مولاي صاحب الجلالة،
لقد شكلت رعايتكم الكريمة، يا مولاي، السند الأساس لنجاح هذه المناظرة التي كانت فضاء مفتوحاً لتقاسم المعارف
والخبرات، وإطلاق مبادرات عملية تكرس التزام المملكة بجعل الذكاء الاصطناعي أداة فعالة لتحقيق التنمية
المستدامة، بما ينسجم مع روح النموذج التنموي الجديد، ويعسد التزامكم الراسخ بجعل التحول الرقمي رافعة لتحقيق العدالة
الاجتماعية والبيئية وتقليص الفوارق.
وإن المشاركون والمشاركات، وهم يستعرضون ما جاء في خطابات جلالتكم السامية حول ضرورة تأهيل الرأسمال
البشري وتمكين الشباب والنساء من ولوج اقتصاد المعرفة، ليعبرون عن بالغ تقديرهم لما وفرتموه من ظروف ملائمة
لإنجاح هذا الحدث الوصني العام، ويثمنون عالياً ما تفضل به المنظومة الرقمية الوصية من اهتمام رفيع تحت قيادتكم
الرشيدة، وما تحقق بفضل رؤيتكم المستنيرة من أورش كبرى في مجال البنية التحتية التكنولوجية، وأمن المعلومات،
وتحديث الإدارة العمومية.

مولاي صاحب الجلالة،
لقد مكنت أشغال هذه المناظرة من تأكيد الدور الجوهرى للذكاء الاصطناعي في تطوير القطاعات الحيوية ببلادنا،
ولاسيما التعليم، الرياضة، الصحة، الفلاحة، الصناعة، الثقافة، والتعاون الدولي، وكذا الوقوف على رهانات التحولات
العالمية المتسارعة في هذا المجال، وإبراز الحاجة إلى اعتماد إحصاءات تشريعية وتنظيمية وأخلاقية ملائمة لضمان الاستخدام
المسؤول والمنصف للتقنيات الحديثة، في احترام تام للخصوصيات الثقافية والقيم الإنسانية النبيلة التي أكلتم عليها
جلالتكم في مختلف مبادراتكم القادرة على بناء مجتمع المعرفة.
كما شكلت مداخلات الخبراء الوصنيين والدوليين فرصة لتشخيص التحديات واستكشاف الحلول المبتكرة، وتعزيز روح
الشراكة بين القطاعين العام والخاص، وتعزيز البحث العلمي والابتكار التكنولوجي، بما يعزز مكانة المملكة المغربية
كقطب إقليمي ودولي في مجال الذكاء الاصطناعي والاقتصاد الرقمي، ويكرسها مركزاً للتلاقح والتعاون في القارة
الإفريقية والعالم العربي.

مولاي صاحب الجلالة،
إن المشاركون والمشاركات في هذه المناظرة، إذ يجلدون لكم ولائهم ووفاءهم، ليعبرون عن فخرهم واعتزازهم بالرؤية
الملكية السديدة التي جعلت من الذكاء الاصطناعي والرقمنة دعامة أساسية للنموذج التنموي الوصني، وأداة لتحقيق
التنمية الشاملة والمستدامة، سائلين الله عز وجل أن يعفكم غمراً وملائمة لهذا الوصن الأمين، وأن يقر عينكم بولي
عهدكم المحبوب صاحب السمو الملكي الأمير الجليل مولاي الحسن، ويشهد أزركم بصنوكم السعيد صاحب السمو
الملكي الأمير الجليل مولاي رشيد، وسائر أفراد أسرتم الملكية الشريفة، إنه سميع عليم.

والسلام على مقامكم العالي بالله ورحمته تعالى وبركاته.

وحرر بالرباط في يوم 6 محرم 1447

الموافق لـ 2 يوليوز 2025.

حكيمه الأعز الشريفة

أمل الفلاح السعوشي

الوزيرة المنتدبة لدى رئيس الحكومة المكلفة بالانتقال الرقمي وإصلاح الإدارة

THEY CARRY THE VISION

« Parents are minimally involved in public schools and possess inadequate information." [...] However, the issue can be resolved by sending them voice communications in French, Amazigh, or Darija.»

Mr. Mohamed Saad Berrada, Minister of National Education, Pre-school Learning, and Sports

« A new wave of professional generalists who are AI-friendly is on the horizon." Artificial intelligence can conduct artificial intelligence training.»

Mr. Younes Sekkouri, Minister of Economic Integration, Micro-Enterprises, Employment, and Competencies

« [...] AI and the energy and sustainable development sector are inextricably linked. In the absence of energy, there will be no server, data center, or artificial intelligence, and vice versa.»

Madame Leila Benali, Minister of Energy Transition and Sustainable Development

«We are beginning to automate creativity, and the barrier between the idea and innovation is no longer present." [...] You can envision the miracles it produces, but you cannot fathom the prosperity it can generate in a developing nation.»

Mr. Riad Mezzour, Minister of Industry and Trade

THEY CARRY THE VISION

«We must strengthen South-South cooperation initiatives, increase their impact, and ensure the representation of Southern nations in international forums.»

Mr. Chakib BENMOUSSA, High Commissioner for Planning

«The richest nation will not emerge victorious in this competition for artificial intelligence." I believe the nation with the most engineers and technicians, as well as the most training, will emerge victoriously in this competition.»

Mr. Chakib Alj, President of the General Confederation of Moroccan Enterprises

«Artificial intelligence is a transformative force that is present today, not in the distant future.»

Ms. Deemah Alyahya, Founder and Secretary-General of the Digital Cooperation Organization (DCO)

«The success of AI in the public interest is contingent upon the presence of three critical components: a truly open AI ecosystem, quality data, and shared responsibility for citizens.»

Mr. Martin TISNE, founder of Current AI

THEY CARRY THE VISION

«The member states of the United Nations are the foundation of its power." Morocco and the United States jointly submitted the first resolution on artificial intelligence to the General Assembly, which caused a major shift in the field. [...] If we fail to engage in the field of AI at this time—and we should have done so yesterday—certain regions of the globe will be left behind.»

Ms. Marina Walter, Assistant Administrator and Deputy Director of the UNDP Regional Bureau for Arab States

«Morocco is one of four African countries that have adopted such strategies because of its ambitious actions and the national strategy that will sanction these national gatherings.»

Mr. Omar Hilale, Permanent Representative of Morocco to the United Nations in New York

"Artificial intelligence represents both a business and a challenge, major opportunities for education, health, and development, but also poses risks if it is not ethically framed."

Mrs. Isabel Correia Viegas de Abreu, Minister of Education, Culture, Science, and Higher Education of the Republic of São Tomé and Príncipe

"We don't want to be mere recipients of imported solutions." We want to contribute to the creation of standards — not to reject them, but to enrich them."

Mr. Hicham ELHABTI President, Mohammed VI Polytechnic University (UM6P)

THEY CARRY THE VISION

«We must establish a foresight of the effects of artificial intelligence on three sectors: employment, science and technology, and economics.»

Mr. Mohammed Tawfik Mouline, Director General of the Royal Institute for Strategic Studies

«We must maintain a high level of control, allow the private sector to flourish, establish a tax system that enables them to reinvest, and establish a financial system, or at least a finance system that is willing to take risks." Morocco faces the challenge of implementation. To transcend the intermediate economy, we must initiate innovation.»

Mr. Karim El Aynaoui, Executive President of the Policy Center for the New South, Executive Vice-President of Mohammed VI Polytechnic University, and Dean of its Humanities, Economics, and Social Sciences Cluster.

«Venture capital funds, seed funds, and growth capital funds are the primary sources of funding for technological start-ups worldwide, rather than commercial institutions. As of December 31, 2024, there were 69 investment funds in the country, which collectively financed 320 companies and raised a total of 32.1 billion dirhams.»

Mr. Mohamed ELKETTANI, Chairman and CEO of Attijariwafa Bank

«In today's digital society, AI transforms humans into a collection of information." Some individuals believe that these machines are becoming increasingly autonomous and powerful, which could potentially require them to participate in decision-making processes.»

Mr. Mohammed BENHAMMOU, President of the Moroccan Center for Strategic Studies (CMES)

RECOMMENDATIONS

AI governance

- > Design a comprehensive roadmap for AI to define Morocco's objectives, priorities, and ethical components, aligned with national specificities and global standards, while promoting the responsible use of AI.
- > Develop the legal framework accompanying the development and use of AI, including the ethical principles that govern it, while ensuring full respect for the principles of data confidentiality, transparency, and accountability.
- > Produce ethical guidelines to ensure that AI prioritizes fairness, transparency, and accountability and addresses potential risks such as discrimination and job loss.

Strengthening AI infrastructure

- > Encourage investments in research and development and technology transfer partnerships between public and private stakeholders to produce intelligent solutions that support the national economy.
- > Establish national platforms to ensure data security, allowing stakeholders to develop innovative solutions in priority areas while fully respecting personal data protection ethics.
- > Establish advanced data centers equipped with powerful computational resources to meet the needs of research and artificial intelligence applications.
- > Strengthen national cybersecurity capabilities by developing intelligent solutions to monitor threats and secure digital infrastructures against cyberattacks.

AI at the service of social progress

- > Develop the use of artificial intelligence for the early diagnosis of diseases and improve the quality of health services, particularly in vulnerable areas, thereby increasing the efficiency of the health system and reducing territorial disparities.
- > Integrate artificial intelligence into pedagogical evaluation processes and design intelligent educational content that allows for the diagnosis of difficulties and the proposal of individualized support plans, thereby improving the quality of learning.

Exploiting AI to better manage infrastructure

- > Leveraging artificial intelligence to monitor and maintain large infrastructures improves their durability and efficiency.
- > Integrate artificial intelligence to streamline traffic, improve public transportation, and optimize fleet management.
- > Use artificial intelligence in planning, constructing, and maintaining major sports infrastructures according to sustainable and intelligent standards, thereby contributing to organizing major international sporting events and improving the quality of facilities for athletes and the public.

Energy and water security

- > Develop intelligent systems to monitor initiative-taking and manage vital resources more effectively, ensuring their optimal use while enhancing water, food, and energy security.
- > Leverage artificial intelligence in smart grids, demand forecasting, and improved management.

RECOMMENDATIONS

Administrative Transformation through AI

- > Create AI-based platforms for personalized communication, analyze feedback, and improve responsiveness to citizens' needs. Intégrer l'intelligence artificielle pour analyser les big data, soutenir l'élaboration de politiques fondées sur des données probantes et prendre des décisions plus éclairées.
- > Generalize the use of artificial intelligence technologies to improve the performance of administrative services, simplify procedures, and enhance the transparency of transactions in both the public and private sectors.
- > Integrate artificial intelligence to analyze big data, support the development of evidence-based policies, and make more informed decisions.

Culture and heritage

- > Leverage artificial intelligence to preserve the national cultural and linguistic heritage, develop digital content, and highlight Moroccan cultural diversity in the global digital space.

Entrepreneurship and startups

- > Support small, medium, and large enterprises and startups in adopting artificial intelligence within their production and service activities through incentive programs and technical support to increase their productivity and enhance their competitiveness.
- > Launch specialized incubators and innovation centers that offer emerging companies an environment conducive to developing intelligent Moroccan solutions with added value locally and internationally.
- > Stimulate investment in research and development and technology transfer partnerships between public and private stakeholders to produce innovative solutions supporting the national economy.

International and South-South cooperation

- > Develop specialized AI research centers at the national and African levels to facilitate international cooperation and address regional challenges such as agriculture, health, industry, and smart cities.
- > Establish strategic partnerships with research institutions and global AI technology companies to exchange knowledge and access the latest technologies in the field.
- > Organize global AI events to promote knowledge exchange, introduce contemporary trends to Morocco, and attract investments in this field.

« Digital for Sustainable Development » (D4SD), portée en partenariat avec le PNUD.
